

KratorAI

BRAND ONBOARDING BRIEF

A product implementation guide for Designers & Developers to bridge the gap between form and conversation.

THE CORE DESIGN PRINCIPLE

**This is not a form. It is a
conversation.**

The business owner should leave onboarding feeling like they just talked to someone who genuinely understood their brand. Not like they completed a setup wizard.

Extracting **Five Layers** of Intelligence

Offerings

What they sell — products, services, prices. The foundation layer that most onboarding flows focus on.

Audience

Who they sell to — psychology and anxieties. Moving past demographics into emotional drivers.

Voice

Tone, rhythm, and cultural register. Demonstrated live through actual words, not just described.

Beliefs

Genuine opinions and POVs. What makes them distinct as a person, not just a business entity.

Expression

Natural expression captured live without self-editing. This is the Level 5 extraction goal.

The Full Experience Arc

Input System: **Voice & Type**

Voice by Default

Extracts personality, vocabulary, and rhythm. Used for subjective, descriptive questions.

- Business descriptions in plain language
- Customer personas & anxieties
- Core beliefs & points of pride

Type by Default

Extracts precision data where transcription errors would be costly or corrupting.

- Product names and exact pricing
- Competitor names & URLs
- Posting frequency & guardrails

Mode follows the question. Never present a binary choice at the start.

The Opening Screen

- ✓ **Set the Frame:** Signal that this is a conversation, not a wizard setup.
- ✓ **Human Copy:** "In the next few minutes, KratorAI is going to learn everything about your brand."
- ✓ **Zero Stakes Start:** First question is simply their name and business name to normalize voice mode.
- ✗ **No Progress Bars:** Avoid walls of fields or "Steps 1 of 10" indicators.

Architecture: **Signal Extraction**

▶ **Q1: Plain Language Description**

Captures how the owner frames their own business naturally.

▶ **Q4: The Live Voice Sample**

Crucial: Verbatim caption sample for rhythm and vocabulary.

▶ **Q7: The Point of View**

Extracts brand conviction and competitive differentiation.

▶ **Q12: Guardrails**

Negative constraints to prevent trust-damaging content failures.

▶ **Q14: Brand Personality**

A behavioral profile (e.g., "The loudest person in the room").

▶ **Q11: Customer's World**

Captures seasonal and cultural relevance context.

The "Wow" Moment

Midway through (after Q4), KratorAI generates a single piece of sample content in real-time.

Why it works: It converts a leap of faith into demonstrated reality. The user sees their voice reflected before the onboarding is even finished.

"Here's what KratorAI already sounds like in your voice. We're only halfway through — it gets more accurate from here."

The Intelligence Profile

Category	Extracted Data Points	Strategic Value
Brand Identity	Stage, Price Positioning, Cultural Context	Sets the baseline for content sophistication.
Audience	Psychographics, Anxiety, Deepest Desires	Ensures content is human-centric, not generic.
Voice Fingerprint	Formality, Warmth, Emoji Usage, Signature Phrases	Calibrates the generation layer for high fidelity.
POV	Authentic Pride, Core Beliefs, Personality Archetype	Differentiates the brand from market competitors.

The Calendar Reveal

This is not an end screen. It is a performance. Present the first 30 days of content as a reveal. Remove obligation while retaining control: "KratorAI will publish these automatically, but you are always in the driver's seat."

The Edit-Capture System

100%

Automated Learning Loop

Every edit a user makes teaches KratorAI about their brand voice. The system stores original vs. edited versions and extracts the delta.

Continuous Calibration: Removing exclamation marks increases formality score automatically.

Approval Weights: Unedited approvals become high-confidence samples in the fingerprint.

Questions?

Building the future of Brand Intelligence Together.

For Designers

Master the emotional arc & seamless voice/type transitions.

For Developers

Build the living Intelligence Profile and edit-capture engine.
